

ARIZONA STATE UNIVERSITY WEST CAMPUS

Academic & Office Building

Glendale, Arizona

Client:

Arizona State University

Typology:

Academic Space

Building Size:

55,000 SF

LEED:

LEED Silver

Todd & Associates partnered with Arizona State University (ASU) to design one of its newest additions to the West campus—an impressive three-story, 55,000 SF academic building. Designed to foster innovation, collaboration, and student success, this state-of-the-art facility will be a hub for creativity, learning, and interdisciplinary exploration. Spaces include a student gallery, computer labs, a drawing lab, faculty offices, and future areas for growth.

The student gallery space serves as a platform for ASU's budding artists, designers, and creatives to showcase their work. The cutting-edge computer labs offer students access to high-performance computing resources and the latest software applications, enabling them to develop technical skills, engage in data-driven research and explore emerging technologies.

The inspiration drawing lab features ample natural light, spacious workstations, and separate classrooms for students studying fine arts, architecture, or other disciplines that require hands-on creative expression.

The faculty space is found on the 3rd floor and serves as a welcoming space for faculty members to provide guidance, support, and academic advisement to students. ASU West campus is continually evolving and the new academic building has been designed with future growth in mind. The building includes flexible spaces that can be adapted to accommodate the changing needs of the campus community.
